Pitch Areas: 586m²
SELSports Units: 2344no.
Attenuation Volume: 47m³

KEY CONTACTS

Client: OnSide North West
Main Contractor: Eric Wright
Date: 2011

THE SCHEME

Blackburn Youth Zone, supported by Central Government funding has been established to broaden the leisure and arts opportunities available for young people in the very centre of Blackburn. It is a state of the art facility providing a roof top 5-a-side football pitch which was constructed using the SELSports rooftop sports system.

THE SOLUTION

The SELSports Synthetic Grass system installed comprised a synthetic grass playing surface on a rubber shockpad on SELSports 85 units on a waterproof membrane with a protection fleece layer. Polymeric and resin bound gravel surface options are available.

The SELSports system was selected due to the unique benefits it delivers like a fully permeable playing surface, faster installation period, it's a modular system, simplified logistics for getting the system on the roof and the finished installation is lightweight offering reduced roof loadings. The SELSports 85 units can replace a 255mm thick layer of 30% voided stone. There is also an established range of supporting ancillary components such as floating fence posts, integral perimeter edging restraints, flow control roof outlet chambers, downpipe inlet filter chambers.
