SELSports - Case Study

White Collar Factory, London

Level 17 Social Space

KEY FIGURES

Grass Area: 117m²
SELSports Units: 468no.
Attenuation Volume: 10m³

KEY CONTACTS

Client: Derwent London
Main Contractor: Brookfield Multiplex
Date: 2016

THE SCHEME

The Client wanted to a social / recreational area on the top floor, level 17 to take advantage of the breathtaking London backdrop, one of the most impressive skylines in the world. One of this buildings unique features.

THE SOLUTION

Installing a synthetic grass system on level 17 presented some serious logistical issues for getting materials to such a high level with limited access. Our solution was to reduce the roll widths and bag sizes delivered to site. This made it easier to get the materials to the roof and helped the handling during the installation.

The synthetic grass system was reinforced with additional geotextile layers so that the surface could safely take the weight of a stiletto heel. The synthetic grass was laid on to a resin bound gravel layer which was installed on top of a layer of SELSports units. A metal edging was installed on to the edge of the installation to provide a clean demarcation between the adjacent area. The finished surface was fully permeable.
